

# SPACE DESIGN LOAD SUMMARY

## Bathroom\_2

2026-09-27

Level: Level 0 · Internal condition: TM59\_Bathroom

### DESIGN CRITERIA

|                            | Heating | Cooling  |
|----------------------------|---------|----------|
| Room set point             | 16.0 °C | 150.0 °C |
| Outdoor dry bulb           | —       | —        |
| Outdoor RH (coincident)    | —       | —        |
| <b>ROOM HUMIDITY</b>       |         |          |
| Humidification set point   | —       |          |
| lower RH limit             |         |          |
| Dehumidification set point | —       |          |
| upper RH limit             |         |          |

### SIZING (TAS DESIGN LOADS)

|                                                            | Heating              | Cooling              |
|------------------------------------------------------------|----------------------|----------------------|
| Design load                                                | 0 W                  | 0 W                  |
| Design load per area                                       | 0.0 W/m <sup>2</sup> | 0.0 W/m <sup>2</sup> |
| Sizing multiplier                                          | not set              | not set              |
| Design loads: from Tas sizing — date/currency not recorded |                      |                      |

### HEATING

Peaks not recorded: the heating results pre-date the design-day and full-year peak record. Re-run the simulation to report the heating peaks.

### COOLING

Peaks not recorded: the cooling results pre-date the design-day and full-year peak record. Re-run the simulation to report the cooling peaks.

### RESULTS

|                       | Heating            | Cooling            |
|-----------------------|--------------------|--------------------|
| Status                | Peaks not recorded | Peaks not recorded |
| Result source         | —                  | —                  |
| Read into model       | —                  | —                  |
| Matches current model | —                  | —                  |

Peak hour: a design-day peak has an hour of the day only, no date; a full-year peak shows day and hour, no year.  
Design loads (sizing) and simulated peaks are shown side by side for information; no acceptance rule is applied.
